Combustion and Flame

THE JOURNAL OF THE COMBUSTION INSTITUTE

The journal exists for the publication of experimental and theoretical investigations of combustion phenomena and closely allied matters. Among the subjects emphasized are: atmospheric pollution from combustion; combustion in practical systems; deflagration and detonation waves; electrical aspects of flames; experimental techniques; fire phenomena; flame ignition; inhibition, propagation, stability and structure; fluid dynamics and combustion; heat transfer and radiation; heterogenous combustion; kinetics and mechanisms of combustion reactions; limits of flammability and of spontaneous ignition; modeling and scaling in combustion processes; new applications of combustion; propellants; sooting; spectra; supersonic reacting flow; thermal decomposition processes; thermochemistry and thermodynamics; transient species; transport properties and turbulence in flames. The Editors also encourage the submission of critical reviews of recent research. Announcements and reports of Combustion Institute and other pertinent meetings will be published whenever possible, as will reviews of relevant books.

EDITORS

J. N. Bradley
Department of Chemistry
University of Essex
Colchester CO4 35Q, England

H. B. Palmer
Fuel Science Section
Department of Materials Science and Engineering
319 Steidle Building
University Park, Pennsylvania 16802

DEPUTY EDITORS

R. F. Simmons
Department of Chemistry
The University of Manchester
Institute of Science and Technology
P.O. Box 88, Sackville Street
Manchester M60 1 QD, England

R. A. Strehlow
Department of Aeronautical and Astronautical Engineering
101 Transportation Building
Urbana, Illinois 61801

F. A. Williams
Department of Applied Mechanics and Engineering Sciences
University of California, San Diego
P.O. Box 109
La Jolla, California 92037

EDITORIAL BOARD

Term ending 1980
P. G. Ashmore
P. J. Van Tiggelen
H. Gg. Wagner

Term ending 1982
R. Delbourgo
M. F. R. Mulcahy

COMBUSTION AND FLAME

THE JOURNAL OF THE COMBUSTION INSTITUTE

VOLUME 37 1980

Contents

W. BRÖTZ, A. SCHÖNBUCHER, V. SCHELLER,
and A. KETTLER (Stuttgart, Federal Republic of Germany)
Electronically Produced Equidensities from Time Exposures and
Instantaneous Photographs in the Investigation of Pool Flames 1
T. Z. HARMATHY (Ottawa, Ont., Canada)
Ventilation of Fully-Developed Compartment Fires 25
ANTHONY M. DEAN, RON L. JOHNSON, and DON C. STEINER (Columbia, MO)
Shock-Tube Studies of Formaldehyde Oxidation 41
W. LENZ and R. GÜNTHER (Karlsruhe, West Germany)
Measurements of Fluctuating Temperature
in a Free-Jet Diffusion Flame 63
R. A. ALTENKIRCH, R. EICHHORN, and P. C. SHANG (Lexington, KY)
Buoyancy Effects on Flames Spreading Down Thermally Thin Fuels 71

Brief Communications

A. G. W. BRADBURY and F. SHAFIZADEH (Missoula, MT)
Role of Oxygen Chemisorption in Low-Temperature
Ignition of Cellulose 85
J. E. ORRIN, I. M. VINCE and F. J. WEINBERG (London, England)
Ignition by Radiation from Plasmas 91
J. J. DICK (Los Alamos, NM)
Detonation Initiation Behavior of Some HMX/AP/Al Propellants 95

Comments

P. H. THOMAS and M. L. BULLEN (Borehamwood, England)
Comments Arising from "Thermoplastic Pool Compartment Fires"
By Babrauskas and Wickström 101
V. BABRAUSKAS (Washington, D.C.) and U. G. WICKSTRÖM (Lund, Sweden)
Reply to Comments of Thomas and Bullen 105

Book Review 107

ANTHONY M. DEAN and RON L. JOHNSON (Columbia, MO)
Shock Tube Studies of the $N_2O/CH_4/CO/Ar$ and $N_2O/C_2H_6/CO/Ar$ Systems 109
C. K. LAW, C. H. LEE, and N. SRINIVASAN (Evanston, IL)
Combustion Characteristics of Water-in-Oil Emulsion Droplets 125
H. JAHANI and S. R. GOLLAHALLI (Norman, OK)
Characteristics of Burning Jet A Fuel and Jet A Fuel–Water Emulsion Sprays 145
T. J. THOMAS and U. S. NANDI (Bangalore, India)
Thermal Decomposition of Ethylene Diamine Diperchlorate 155
TOSHIMI TAKAGI, HYUN-DONG SHIN, and AKIRA ISHIO (Osaka, Japan)
Local Laminarization in Turbulent Diffusion Flames 163
CHARLES K. WESTBROOK (Livermore, CA) and FREDERICK L. DRYER (Princeton, NJ)
Prediction of Laminar Flame Properties of Methanol–Air Mixtures 171

Brief Communications

A. A. PUTNAM, D. A. BALL, and A. LEVY (Columbus, OH)
Effect of Fuel Composition on Relation of Burning Velocity to Product of Quenching Distance and Flashback Velocity Gradient 193
G. PRASAD, K. KISHORE, and V. R. PAI VERNEKER (Bangalore, India)
Effect of Ageing on Ballistic and Mechanical Properties of Propellants Having Various Oxidiser Loadings 197
R. E. MITCHELL, A. F. SAROFIM, and L. A. CLOMBURG (Cambridge, MA)
Partial Equilibrium in the Reaction Zone of Methane–Air Diffusion Flames 201
C. R. KRISHNA and A. L. BERLAD (Brookhaven, NY)
A Model for Dust Cloud Autoignition 207
D. HOLVE and S. SELF (Stanford, CA)
Optical Measurements of Mean Particle Size in Coal-Fired MHD Flows 211

Meeting Announcement 215

R. BOUBAL (Aubervilliers, France), C. VOVELLE, J. R. RICHARD, R. DELBOURGO (Orleans Cedex, France), and P. COUCHOUD (Saint Fons, France)
Flame Retardancy Obtained by Increasing the Aromatic Content of Polyethylene Terephthalate 217
R. E. MITCHELL (Livermore, CA), A. F. SAROFIM, and L. A. CLOMBURG (Cambridge, MA)
Experimental and Numerical Investigation of Confined Laminar Diffusion Flames 227
C. P. FENIMORE (Schenectady, NY)
Destruction of NO by NH_3 in Lean Burnt Gas 245
K. RAJESHWAR, V. R. PAI VERNEKER, and J. DUBOW (Fort Collins, CO)
A Differential Scanning Calorimetry Study of the $MClO_4$ (M = Na, K, Rb, Cs, and NH_4) System: Heats of Crystal-Structure Transformations and Other Thermochemical Data 251
I. J. JAGODA, G. PRADO, and J. LAHAYE (Mulhouse, France)
An Experimental Investigation into Soot Formation and Distribution in Polymer Diffusion Flames. 261
PHIROZ M. BHAGAT (Cambridge, MA)
Wood Charcoal Combustion and the Effects of Water Application 275
STEVEN B. OBLATH (Berkeley, CA) and JAMES L. GOLE (Atlanta, GA)
On the Continuum Emissions Observed upon Oxidation of Aluminum and its Compounds 293
D. L. BAULCH and J. DUXBURY (Leeds, England)
Ethane Decomposition and the Reference Rate Constant for Methyl Radical Recombination 313

Brief Communication
E. G. SKOLNIK and E. T. McHALE (Alexandria, VA)
Sampling of Soot in Diffusion Flames 327

Comments
C. M. COATS (Hants, England)
Comment on "Review of Flashback Reported in Prevaporizing/Premixing Combustors" 331
S. L. PLEE and A. M. MELLOR (West Lafayette, IN)
Reply to Comments by C. M. Coats on "Review of Flashback Reported in Prevaporizing/Premixing Combustors" 335

TSI's COUNTER-TYPE SIGNAL PROCESSOR

. . . FOR YOUR LASER DOPPLER VELOCIMETRY SYSTEM

TSI counter systems have been engineered in a modular configuration for optimized function and performance based on your measurement requirements.

That's why TSI offers a modular family of components to make up its System 1990 Counter-Type Signal Processor. The complete System can process LDV signals to give mean velocity and velocity fluctuation information for gas or liquid flow.

TSI supplies complete laser velocimetry systems which include a laser, optics and photodetector for your flow applications.

For more information and TSI's free Laser Velocimetry Systems Catalog which includes a technical discussion section, contact:

- **1 nanosecond resolution for accuracy**
- **200 MHz maximum Doppler frequency for dynamic range**
- **24 filters — 30 db/octave (100 db/decade) for superior performance**
- **Effective data validation circuitry for low signal-to-noise ratio signals**
- **Total burst mode for maximum measurement accuracy**
- **12 bit D/A converter provides 0.05% resolution analog data**
- **Operates on as few as 2 or as many as 128 fringes**
